About Adam

After receiving his degree from Montclair State College, Adam was given the opportunity to study in Spain, where he mastered the techniques of watercolor and oil painting. His paintings reflect his uncanny ability to capture on canvas, the beauty and vitality of life. Adam's scenes transcend time and project the viewer into the image with feelings of tranquility and peace. Adam's work is currently on display in major galleries throughout the United States.

Offset Lithograph

The offset lithography process works by first transferring an image photographically to thin metal, paper, or plastic printing plates. Unlike other forms of printing, the image on the printing plate is not recessed or raised. Rollers apply oil-based ink and water to the plates. Since oil and water don't mix, the oil-based ink won't adhere to the non-image areas. Only the inked image portion is

then transferred to a rubber blanket (cylinder) that then transfers the image onto the paper as it passes between it and another cylinder beneath the paper.

The term offset refers to the fact that the image isn't printed directly to the paper from the plates, but is offset or transferred to another surface that then makes contact with the paper.
