

[The Blue Vase](#) by [Edna Hibel](#)

Lithograph on Paper - Main Subject: Abstract

Item Number

7572268264

Retail Value

\$350

ArtRev.com Price

\$320

You Save 9% Off [-\$30.00]

Dimensions (As Shown)

13.5W x 25H Inches

34.29W x 63.5H cm

Medium

Lithograph on Paper

Edition

- Limited Edition of 1000

- Plate-Signed 

- Numbered 

Custom Framing

- Design-it-yourself and Save!
- Museum-Quality Framing
- Up to 50% off Gallery Prices

Frame Your Artwork Online & Save!

Did you know that you can custom frame this artwork to your exact taste and specifications. Spark your own creativity and frame your artwork in as little as 2 minutes in three easy steps! Our Online frame shop offers museum quality framing services at prices up to 50% off your local gallery or frame shop. [See art collection](#) .

About Edna Hibel

For over 40 years, Edna Hibel has been referred to as America's best loved and most versatile artist, and best colorist. Since being commissioned by the Foundation of the U.S. National Archives in 1995 to commemorate 75 years of women receiving the universal right to vote, Hibel is now acclaimed the "Heart and Conscience of America." when Ms. Lucy Baines Johnson, of the U.S. National Archives described her as such.

Born in 1917 to Abraham and Lena Hibel of Boston, Massachusetts, Miss Hibel grew up in the Boston area. She was educated at Brookline High School where she met her future husband, Theodore Plotkin. She spent many summers at the shore in Hull, Massachusetts and in Maine studying watercolor painting. She began painting at the age of 9 in elementary school. In addition to art, Miss Hibel was very proficient in tennis.

Edna Hibel was educated at the Boston Museum School of Fine Arts, from 1935-39, and was a special graduate student later. In 1942, she was honored with the Sturtevant Traveling Fellowship to Mexico.

Edna began "pulling" stone lithographs in 1966 in Boston and then moved to work in a fourth generation 'atelier" in Zurich in 1970. Lithography is a drawing medium and it is especially suited to her draftsmanship and exquisite control over "the line." She innovated in creating works with up to 32 stones (or colors) on paper, silk, wood veneer and encouraged her porcelain manufacturers to allow her to create color separations with stone lithography which were transferred in a "secret" complicated process onto Bavarian hard paste porcelain. These works are now called lithographs on porcelain. Ms. Hibel has created the "Arte Ovale" series, and various plaques with this technique. With both lithographs on paper and on other materials, she often segments her editions of lithographs by colors, papers or the use of gold.

In the past, Edna painted each day in her studio at home beginning early in the morning and hand enhances her original stone lithographs, serigraphs and giclee with pastels, oil paint, gold leaf, pencil, ink, conte crayon and charcoal. She traveled for special exhibits to promote the Hibel Museum of Art and to join the Edna Hibel Society on overseas trips. She would bring home new creations from almost every trip. She normally works in oil paint. However, in recent years, she worked in watercolors again on a limited basis since she had mastered the techniques as a young person. The Hibel Museum of Art has received a wonderful collection of watercolors from the 1930's and 1940's which confirms her master watercolor artist status.

The work of Edna Hibel has been exhibited in prestigious museums and galleries in more than 20 countries on four continents including national museums in Brazil, China, Costa Rica, Russia and the U.S.A., and under the royal patronage of Count and Countess Bernadotte of Germany, Count Thor Bonde of Sweden, Prince and the late Princess Rainier of Monaco and Her Majesty Queen Elizabeth II of England.

Hibel received medals of honor from His Eminence Pope John Paul II and the late Belgian King Baudouin, and has received six honorary Doctorate degrees including one from Eureka College, the alma mater of President Ronald Regan and Northwood University of Florida, Michigan and Texas. She received her sixth honorary degree from Simmons College, Boston in May, 2005. According to Will Ray formerly of the Palm Beach County Cultural Council, Ms. Hibel is Palm Beach's most famous artist.

In addition to her numerous artistic awards, Edna Hibel has received many humanitarian honors for her more than one half century in raising donations with her work for children's and medical charities. She has also used her humanistic and compassionate work to bring peace through cultural understanding between China and the United States, Yugoslavia and the United States and Russia and the United States with her "Golden Bridge" and "Peace Through Wisdom" exhibits in those countries. The television documentary " Hibel's Russian Palette" was developed during her trips and art shows in Leningrad, now St. Petersburg. She was recognized for her effect on people and their love and understanding for each other long before her travels to communist countries with an honorary doctorate degree from the University for Peace in Costa Rica.

In 2001, Edna received a Lifetime Achievement Award from "Women in the Visual Arts," an organization of artists in the South Florida area.

Lithograph on Paper

This printing technique uses a planographic process in which prints are pulled on a special press from a flat stone or metal surface. The surface has been chemically treated so that ink sticks only to the design areas, and is repelled by the non-image areas. Lithography was invented in Germany in 1798. The early history of lithography is dominated by great French artists such as Daumier and Delacroix, and later by Degas, Toulouse-Lautrec, Picasso, Braque and Miro.

Based on the principle that oil and water repel, a Lithograph is created when an artist produces an oil-based or pen image on a stone or piece of metal. This surface is then moistened and covered with an oil-based ink. The resulting chemical reaction between the oil and water drives away the ink on the surface except where the drawing was first done. Fine quality paper is then placed against the surface and a lithographic press is used to create the print. Modern technology and processes have provided artists with many unique methods with which to create magnificent lithographs. In the 1890s color lithography became enormously popular with French artists, Toulouse-Lautrec most notably of all, and by 1900 the medium in both color and monotone was an accepted part of printmaking, although France and the US have used it more than other countries. George Bellows, Alphonse Mucha, Pablo Picasso, Jasper Johns, David Hockney and Robert Rauschenberg are a few of the artists who have produced most of their prints in the medium.

As a special form of lithography, the Serilith process is sometimes used. Serilith are mixed media original prints created in a process where an artist uses the lithograph and serigraph process. The separations for both processes are hand drawn by the artist. The serilith technique is used primarily to create fine art limited print editions.
